

JAVA IO

1. Write a program to read text from .txt file using InputStream

Answer:

```
import java.io.*;
public class Demo {
    public static void main(String[] args) throws
Exception {
        FileInputStream fis = new
FileInputStream("input.txt");
        int ch;
        while ((ch = fis.read()) != -1) {
            System.out.print((char) ch);
        }

        fis.close();
    }
}
```

2. Write a program to write text to .txt file using OutputStream

Answer:

```
import java.io.*;
public class Demo {
    public static void main(String[] args) throws Exception
{
        FileOutputStream fos = new
FileOutputStream("output.txt");

        String text = "Hello Java";
        fos.write(text.getBytes());

        fos.close();

        System.out.println("Data Written");
    }
}
```

3. Read text from a .txt file using BufferedInputStream

Answer:

```
import java.io.*;

public class Demo {

    public static void main(String[] args) throws Exception
    {

        BufferedInputStream bis =

            new BufferedInputStream(new
FileInputStream("input.txt"));

        int ch;

        while ((ch = bis.read()) != -1) {

            System.out.print((char) ch);

        }

        bis.close();

    }

}
```

4. Write text to a .txt file using BufferedOutputStream

Answer:

```
import java.io.*;

public class Demo {

    public static void main(String[] args) throws Exception
    {

        BufferedOutputStream bos =

            new BufferedOutputStream(new
FileOutputStream("output.txt"));

        String text = "Buffered Output Stream";

        bos.write(text.getBytes());

        bos.close();

        System.out.println("Data Written");

    }

}
```

```
}
```

5. Write a program to read text from .txt file using FileReader

Answer:

```
import java.io.*;

public class Demo {

    public static void main(String[] args) throws Exception {

        FileReader fr = new FileReader("input.txt");

        int ch;

        while ((ch = fr.read()) != -1) {

            System.out.print((char) ch);

        }

        fr.close();

    }

}
```

6. Write a program to write text to .txt file using FileWriter

Answer:

```
import java.io.*;

public class Demo {

    public static void main(String[] args) throws Exception
    {

        FileWriter fw = new FileWriter("output.txt");

        fw.write("Hello FileWriter");

        fw.close();

        System.out.println("Data Written");

    }

}
```

7. Read text from a .txt file using BufferedReader

Answer:

```
import java.io.*;

public class Demo {

    public static void main(String[] args) throws Exception
    {

        BufferedReader br =

            new BufferedReader(new
FileReader("input.txt"));

        String line;
        while ((line = br.readLine()) != null) {

            System.out.println(line);

        }

        br.close();

    }

}
```

8. Write text to a .txt file using BufferedWriter

Answer:

```
import java.io.*;

public class Demo {

    public static void main(String[] args) throws Exception
    {

        BufferedWriter bw =

            new BufferedWriter(new
FileWriter("output.txt"));

        bw.write("Hello Buffered Writer");

        bw.close();

        System.out.println("Data Written");

    }

}
```

9. Write a program to read data from properties file.

Answer:

config.properties

name=Naveen

city=Mangalore

Java Program

```
import java.io.*;
import java.util.Properties;

public class Demo {

    public static void main(String[] args) throws Exception
    {

        Properties p = new Properties();
        FileInputStream fis =
            new FileInputStream("config.properties");

        p.load(fis);
        System.out.println(p.getProperty("name"));
        System.out.println(p.getProperty("city"));
        fis.close();
    }
}
```

10. Write a program to read data from excel

Answer:

Add Apache POI JAR files to your project.

```
import java.io.*;
```

```
import org.apache.poi.xssf.usermodel.*;
```

```

public class Demo {

    public static void main(String[] args) throws Exception
    {

        FileInputStream fis = new
FileInputStream("data.xlsx");

        XSSFWorkbook wb = new XSSFWorkbook(fis);

        XSSFSheet sheet = wb.getSheetAt(0);

        System.out.println(sheet.getRow(0).getCell(0));

        wb.close();

    }

}

```

11. Write a program to write data to excel

Answer:

```

import java.io.*;

import org.apache.poi.xssf.usermodel.*;

public class Demo {

    public static void main(String[] args) throws Exception
    {

        XSSFWorkbook wb = new XSSFWorkbook();

        XSSFSheet sheet = wb.createSheet("Sheet1");

        sheet.createRow(0).createCell(0).setCellValue("Hello
Java");

        FileOutputStream fos =

            new FileOutputStream("data.xlsx");

        wb.write(fos);

        wb.close();

        fos.close();

        System.out.println("Excel File Created");

    }

}

```
